Analyses Covered

- 1. Toss win vs Match win
- 2. Phase impact — Powerplay / Middle / Death
- 3. Top Batters across seasons
- 4. Top Bowlers across seasons
- **5. Surprise Insight — The Chasing Advantage**
- 6. Venue analysis — Batter vs Bowler friendly

Does Winning the Toss Win the Match?

Analysis 1: Toss Advantage in IPL

Toss Winner vs Match Winner
(All IPL Seasons)

Key Findings

- Toss winner wins only ~52% of matches — barely above chance
- Teams choosing to FIELD after winning toss win more often
- Chasing is the smarter toss decision in modern IPL
- No single team consistently converts toss win to match win

Which Phase Impacts Victory Most?

Analysis 2: Phase-wise Run & Wicket Distribution

Powerplay (1-6)

Highest wicket-taking phase. Early collapses are decisive.

Middle Overs (7-15)

Building partnerships here is critical for a big total.

Death Overs (16-20)

Highest run rate phase. Finishers make or break the game.

Top Batters Across IPL Seasons

Analysis 3: Top Batters Across IPL Seasons

Top 15 Run Scorers (All IPL Seasons)

Key Insight: Top run scorers don't always have the best strike rates — the elite batters balance volume AND aggression.

Top Bowlers Across IPL Seasons

Analysis 4: Top Bowlers Across IPL Seasons

Key Insight: Economy rate is a better measure of sustained bowling quality than raw wickets alone.

The Chasing Advantage — A Hidden IPL Pattern

Analysis 5: The Chasing Advantage — A Hidden IPL Pattern
Chasing vs Batting First — Win Rate

% of Teams Choosing to Field After Winning Toss

Chase Win Rate by Season

Total Matches per Season

55-60%

Chase Win Rate

Teams batting second win significantly more than those batting first

Rising

Field-First Trend

Captains increasingly choose to field — this pattern has grown season by season

Dew + Pitch

Why It Happens

Pitch deterioration, dew factor & psychological pressure all favour chasers

Venue Analysis — Batter vs Bowler Friendly Grounds

How to Read This

- Batter-friendly (above median runs/ball)
- Bowler-friendly (below median runs/ball)

Key Findings

- Venues like Chinnaswamy (Bengaluru) heavily favour batters
- MA Chidambaram (Chennai) tends to help spinners & bowlers
- Teams should adjust batting strategy based on venue
- Venue is an underrated factor in IPL fantasy & betting analytics

Key Takeaways

01

Toss is overrated

Winning the toss gives only a ~52% win rate — barely better than a coin flip.

02

Chase to win

Teams chasing win 55–60% of the time. Fielding first is the smarter toss decision.

03

Powerplay wickets are decisive

Early collapses in overs 1–6 almost always lead to a loss. Protect your top order.

04

Balance beats volume for batters

Elite batters combine high run totals with strong strike rates — not just one or the other.

05

Economy rate > wickets for bowlers

Sustained economy is a better measure of bowling quality than raw wicket count.

06

Venue changes everything

Chinnaswamy favours batters; Chepauk favours bowlers — venue strategy is underutilised.
